BOSS

GOVERNED AI LABOR

Make AI work accountable.

The operating system for AI labor

A directive is not a deliverable.

BOSS turns intent into governed execution with role-scoped work, explicit approvals, budget controls, durable receipts, and evidence you can inspect.

01

INTENT

A directive enters a governed work queue.

02

EVIDENCE

Roles, tests, and adversarial review make the case.

03

DECISION

A human approval is recorded before irreversible work.

04

RECEIPT

Consequential actions leave an inspectable trail.

WHAT SHIPS IN THE OSS ENGINE

01 Self-hosted engine + durable PostgreSQL workspace
02 CLI and MCP interface for external agent clients
03 Ollama, vLLM, and OpenAI-compatible local-model lanes
04 Read-only community Mission Control
05 Receipts, approvals, budgets, and leased jobs

START LOCALLY

```
$ docker build -f engine/Dockerfile -t boss-engine .
```

Connect a self-hosted PostgreSQL workspace, bootstrap once, then drive BOSS from the CLI or an MCP-capable client.
